PROJECTS

Project title: Deepfake Image Detection Using Machine Learning.

Developed a deep learning–based Deepfake Detection System using TensorFlow and Keras to accurately classify real and fake facial images

- Developed a Deepfake Detection CNN model using TensorFlow and Keras for binary image classification between real and fake faces.
- Deployed the trained deepfake detection model using Streamlit for an interactive web interface, enabling real-time image uploads and prediction visualization.

Project title: Plant Disease prediction Using Deep Learning.

Implemented a deep learning–based plant disease detection model by applying CNN architecture for accurate leaf disease classification.

- Designed and trained a Convolutional Neural Network (CNN) using TensorFlow and Keras for classifying plant leaf images into multiple disease categories.
- Utilized Python, NumPy, Pandas, Matplotlib, and Streamlit for data handling, visualization, and building an interactive web-based disease detection interface.
